

HITECH CONSTRUCTION COMPANY LIMITED

Builders & Civil Engineers

Alcohol and Drugs Policy

HITECH recognizes that the misuse of both legal and illegal substances can impair employee performance and create safety hazards. The organization prohibits the intake, possession, or trading of any drugs or alcohol on its operational sites, regardless of legality.

To ensure a safe and healthy work environment, HITECH has established stringent procedures to control the use and influence of alcohol and drugs within the workplace.

Principles:

- **Awareness:** Preventive awareness programs about the dangers of drug and alcohol misuse are provided to workers as part of the wellbeing program. Information of external counseling services for struggling with substance dependency issues is also provided to workers.
- **Random Screening:** HITECH conducts random alcohol and drug screenings, including contractors and subcontractors.
- **Zero Tolerance Policy:** A Blood Alcohol Concentration (BAC) of 0.00 is required for anyone on the organization's premises. A BAC level of 0.01 or higher will result in immediate removal from the project and may lead to disciplinary action.
- **Disciplinary Actions:** Violations of this policy may lead to disciplinary actions, including dismissal.
- **Fair Hearing Process:** Mechanisms are in place to ensure that employees subjected to disciplinary actions receive a fair hearing.
- **Referral for Evaluation:** Individuals suspected of being under the influence will be referred to a government-recognized hospital for further evaluation.

This policy applies to all workers, subcontractors, visitors and personnel under the control of HITECH, including those working in the vicinity of operations.

Management is therefore committed to ensuring that various programs, plans, policies, procedures and processes are in place to ensure that the alcohol and drugs misuse on site is eliminated, and the risk from drugs or alcohol misused reduced to zero level
